

PRESS RELEASE

HOLD FOR RELEASE UNTIL APRIL 12, 2010

Linear and TeamCast to Collaborate on Gap-Filler Market Products

Agreement to Include Technology Transfer for Local Manufacture in Brazil

LAS VEGAS, NV – April 12, 2010 – Linear Equipamentos Eletronicos, a global leader in the manufacture of low, medium, and high power transmitters for the Broadcast TV market, announced today an agreement to acquire rights to manufacture the TeamCast GFX-0300 repeater in Brazil for incorporation into the companies Gap-filler product portfolio. The agreement, a TeamCast first, means the paring of both companies' technologies will enable streamlining in the production process, thereby offering substantial cost efficiencies. Manufacturing of the GFX-0300 will begin on one of Linear's assembly lines, in their newly acquired factory, in 2010.

With a range of transmitter power options, the Linear Gap-filler line of products are designed to fill signal holes in existing coverage areas, or placed to target special locations and events, such as arenas, shopping malls, tunnels, or other important-to-reach places. The TeamCast GFX-0300 is a field-proven repeater-engine that addresses the challenges and needs of a growing market for high performance and reliability in digital TV broadcast.

"We are excited about the prospect of building and integrating the GFX-0300 engine into our Gap-filler solutions," says Robinson Caputo, commercial director at Linear. *"The idea to provide the optimal solution at the best price to our customers is essential and our mission. We believe that this relationship with TeamCast will provide us with this opportunity".*

The TeamCast GFX-0300 fully supports all digital modulation standards, in particular the ISDB-T/T_B standard (SBTVD) used in Brazil and other countries in South America, as well as the ATSC standard used in North America.

"We are delighted to offer Linear the ability to build our technology into their products, and are excited to be a part of their manufacturing operation," adds Eric Spampinato, COO at TeamCast, Inc. *"Our goal is to continue to deliver cutting-edge components that provide exceptional performance enhancements to Linear and their customers."*

About Linear Equipamentos Eletronicos:

Linear Equipamentos Eletronicos is a market leader in the design, development, and delivery of TV broadcast transmission solutions, for low, medium and high power markets. Globally, with more than 37,000 transmitters installed in over 40 countries, LINEAR enjoys a reputation for delivering reliability and performance at an exceptional price point. LINEAR's AT7001 Series of exciters are Mobile DTV ready and provide linear and non-linear pre-correction, at the touch-of-a-button. LINEAR's new Gap-filler product line improves DTV coverage in areas obstructed by terrain and buildings - or in areas where higher signal density is needed for indoor and Mobile TV applications.
